## 1. Summary

WSP USA, Inc. (WSP; formerly Ecology and Environment, Inc.), was tasked by the United States Environmental Protection Agency (EPA) to conduct a Phase I Environmental Site Assessment (ESA) of the Osborn Elementary (referred to herein as the "site"), located in Leavenworth, Washington. WSP completed the Phase I ESA activities under Task Order, Subtask Number TO-0380-016, issued under EPA, Region 10, Superfund Technical Assessment and Response Team (START)-IV, contract Number EP-S7-13-07. Apart from exceptions outlined in this report, this ESA was prepared in general accordance with the *American Society for Testing and Materials (ASTM) Standard Practice for Environmental Assessments: Phase I Environmental Site Assessment Process* (ASTM Designation: E1527-13).

The purpose of the Phase I ESA was to identify, to the extent feasible, recognized environmental conditions (RECs) in connection with the site. This assessment included a site reconnaissance conducted on July 15, 2020.

The site consists of the northern half of one parcel of land in Leavenworth, Washington (Figure 1). The site is the location of the former John. H. Osborn Elementary School. Stakeholders involved with the project include the Cascade School District (property holder) and the City of Leavenworth. This Phase I ESA was conducted at the request of the City.

One REC was identified for the subject property under this Phase I ESA as follows:

 The location of a former underground storage tank (UST) on land to the immediate south of the subject property. This former tank previously contained gasoline and could have released this material to the subsurface.

The following data gaps affected WSP's ability to identify RECs associated with the property:

- The site was the subject of a Washington State Department of Ecology (Ecology) enforcement/compliance activity on June 22, 2008. Records associated with this event were not available from Ecology.
- Soil sample results associated with the removal of the UST at the southern adjacent property could not be located.

1

No historic RECs in connection with the site were identified.

Except for the limitations and exceptions discussed in Section 2.5 and the deviations discussed in Section 2.7 of this report, this Phase I ESA complies with the ASTM Standard E1527-13.

10:\STARTDOC\TO-0380-016

No additional services beyond the scope of the ASTM Standard E1527-13 process were conducted as part of this Phase I ESA.

## 2. Introduction

As noted above, WSP was tasked by the EPA to conduct a Phase I ESA of the site.

## 2.1 Site Description, Location, and Legal Description

The subject property contains the former John H. Osborn Elementary School building having a property address of 225 Central Avenue, Leavenworth, Washington, 98826 (Figure 1). At present, the building is a 25,328 square foot, single-story masonry structure having a horseshoe-shaped configuration with northern, eastern, and southern wings. The center portion of the horseshoe is a 10,373 square foot covered outdoor play area. The school was originally constructed in 1955, though additions/remodels were made in 1983 when the southern wing was added and the roof, exterior siding, interior décor, and mechanical equipment were updated (PAA 2019).

The site is on Chelan County Parcel Number 241701680397 of Leavenworth Gardens Block 6; a 5.47-acre piece of land owned by the Cascade School District (PAA 2019). The parcel is in a residential setting and is accessed from Central Avenue on the east property line. The parcel is bounded by Birch Street to the north, Evans Street to the south, and Orchard Street to the west. The City of Leavenworth is considering the purchase of the northern approximate 2.69 acres of this parcel (PAA 2019) which contains the former Osborn Elementary School building, garage, playgrounds, and ball playing fields. The southern portion of this parcel contains the school district's administration building (330 Evans Avenue), a parking lot, a tennis court, and a playing field. The entire parcel is topographically flat and at approximately 1,184 feet above mean sea level.

**Table 1** Parcel Information

Site Address	Parcel Number	Acreage (As per Tax Assessor)
225 Central Avenue Leavenworth, WA 98826	Chelan County, Northern ½ of Parcel Number 241701680397	2.69

Source: PAA 2019.

For further details regarding recent ownership and historic development of the site, refer to Sections 4.5 and 4.8 of this report, respectively.

## 2.2 Purpose

The purpose of the Phase I ESA for the site was to identify, to the extent feasible, RECs in connection with the property. This ESA included a site reconnaissance, research of historical site conditions, determination of possible impacts from nearby facilities, and discussions with School District and City representatives knowledgeable about the site and vicinity.

## 2.3 Scope of Services

The scope of work for this Phase I ESA was in general accordance with ASTM Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Designation: E1527-13). The methodologies presented in this standard represent good commercial and customary practices for conducting Phase I ESA of a site to identify RECs.

## 2.4 Significant Assumptions

While this report provides an overview of potential environmental concerns at the site, both past and present, the Phase I ESA is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the property may have occurred that could not be identified. The conclusions regarding environmental conditions that are presented in this report are based on the scope of work authorized by the EPA.

## 2.5 Limitations and Exceptions

This report has been prepared in accordance with generally accepted methodologies referenced in ASTM E1527-13 and is subject to all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made regarding the professional services provided under the terms of the contract and included in this report.

The conclusions of this report are based, in part, on information provided by parties other than WSP. The possibility remains that unexpected environmental conditions may be encountered at the site in locations that have not been investigated by WSP.

The services performed and outlined in this report were based, in part, on visual observations of the site and interviews with individuals knowledgeable of the site and its former activities.

The objective of this report was to assess environmental conditions at the site, within the context of the EPA Task Order, Subtask and the existing environmental regulations of the applicable jurisdiction. The EPA Task Order, Subtask did not include evaluating compliance of past or future owners with applicable local, tribal, state, and federal government regulations.

This report describes WSP's observations relating to conditions of environmental media at the site. ASTM Standard E1527-13 for Phase I ESAs does not include a requirement for sampling environmental media or for assessing certain other commercial real estate concerns such asbestos-containing building materials, lead-based paint, mold, radon, biological agents, etc. It should be noted that compounds or materials other than those described herein could be present in the environment.

3

## 2.6 Special Terms and Conditions

There were no special terms or contractual conditions for this Phase I ESA.

#### 2.7 Deviations

Except for the limitations and exceptions discussed in Section 2.5, this Phase I ESA complies with ASTM Standard E1527-13.

## 3. User-Provided Information

WSP conducted a site reconnaissance of the site on July 15, 2020. Photographic documentation of the reconnaissance is provided in Appendix A. The Cascade School District, Facilities Director, Teresa Disher, completed a User-Provided Information Questionnaire relating to the subject property (Appendix B). Her responses indicated that she did not know whether there are any environmental liens against the site, nor did she know of any activity or use limitations associated with the recorded land titles for this parcel. Ms. Disher was not aware past or present uses of chemicals on the subject property, or of related spills or cleanups of such material, if any. Ms. Disher indicated that asbestos is present under the school building and that UST may be present on the adjacent property (i.e., the southern half the of school district property). In a follow-on email communication of August 13, 2020, Ms. Disher indicated this UST had been removed, however, she was not able to locate related removal documents.

## 3.1 Reason for Performing Phase I ESA

This Phase I ESA was prepared by WSP at the request of the EPA. The EPA is performing this work based on a request for a Phase I ESA from the City of Leavenworth. The City of Leavenworth is interested in obtaining ownership of the subject property for the purpose of constructing housing, a recreation center, a playground, a park, and an incubator (CoL 2020). The Phase I ESA is intended to identify any RECs associated with the site that may require further evaluation prior to this redevelopment.

## 4. Records Review

The purpose of the records review was to obtain and review records that would help identify RECs in connection with the site.

Some of the records reviewed pertain not only to the site but also to properties within an additional minimum search distance to help assess the likelihood of the migration of hazardous substances or petroleum products onto the site. Unless stated otherwise, the approximate minimum search distances used below were as specified in ASTM Standard E1527-13.

## 4.1 Previous Site-Specific Investigations and Cleanup Actions

Based upon the records reviewed, the only previous investigations of the subject property are related to asbestos and hazardous building materials surveys of the site. No cleanup actions were identified in relation to the subject property within the EDR report, during site related interviews, or by the property owner in the User-Provided Information Questionnaire response.

4

In 1988 an Asbestos Hazard Emergency Response Act (AHERA) inspection was conducted on the school building by Fulcrum Environmental Consulting (Fulcrum) for Cascade School District No. 228. Identified asbestos-containing building materials (ACBM) included approximately 3,500 linear feet of pipe insulation and approximately 3,500 square feet of debris (primarily concrete rubble) in utility tunnels, and approximately 27,000 square feet of roofing material that was under newer metal roofing. This building was periodically re-inspected by Fulcrum as required under the building's AHERA management plan. The most recent reinspection was conducted 2018. At that time, the school was being used to temporarily house students from Peshastin-Dryden Elementary School while that school was being modernized and expanded. Building interior access locations to the utility tunnels containing ACBM had been sealed with brick and outside access locations were locked and had asbestos warning signs. During this re-inspection, all physically accessible known or assumed ACBM that had been identified during earlier inspections were visually re-inspected and reassessed. Furthermore, ACBM previously considered to be non-friable were evaluated to determine whether these materials had become friable, indicating a change in condition. No such condition-related changes were noted. (Fulcrum 2018)

Although not associated with a formal environmental assessment of the subject property, Ecology visited the site grounds in June 2020 for the purpose of field screening in-situ soils for metals. This work was a component of a broader effort to assess possible former orchards that may have used lead arsenate as an insecticide. Although available historical aerial photographs did not indicate former use of the property for orchards, Ecology decided to include it since the property was associated with a school building. Five locations in grass covered areas west and south of the school building were screened at 4 inches below ground surface with an x-ray fluorescence unit for arsenic, lead, and mercury. Three locations contained detectable concentrations of arsenic at 2.0364 milligrams per kilogram (mg/kg), 7.6138 mg/kg, and 7.943 mg/kg. All five locations contained detectable concentrations of lead ranging from 9.6794 mg/kg to 23.4724 mg/kg. Mercury was not detected at any location. All concentrations were viewed to be consistent with natural background concentrations for the region (Newschwander 2020).

In July 2020, a hazardous building materials survey was performed by Orion Environmental Compliance & Consulting for the Cascade School District in support of possible future demolition of the school building. The survey was designed to identify ACBM, lead-containing paint, polychlorinated biphenyl-containing light ballasts, and mercury-containing light tubes or thermostat/switches. Identified items included lead-containing paint (on cabinets in three rooms numbers as 5, 6, and 7) and 637 potential mercury-containing light tubes (located throughout the building). Additionally, a sealed and inaccessible utility corridor was presumed to contain asbestos pipe insulation. (Orion 2020)

#### 4.2 Standard Environmental Records

A search of available federal and state environmental records was obtained from Environmental Data Resources, Inc., (EDR) of Milford, Connecticut. A copy of this search report is provided in Appendix C.

#### 4.2.1 Federal and State/Tribal Databases

Regulatory database information was provided by EDR. The purpose of the records review was to identify RECs in connection with the site. Information in this section is subject to the accuracy of the data provided by the information services company on the date the information was generated; the scope herein did not include confirmation of facilities listed as "unmappable" by regulatory databases.

To ensure that the geocoded address locations for all nearby sites were captured as required by ASTM, the search for facilities in federal and state/tribal databases utilized radii extending from the approximate boundaries of the site. Those search radii and brief descriptions of associated databases are presented in Table 2. Database definitions, descriptions, and the database search report are included in Appendix C.

Table 2 Facilities Identified in Federal and State/Tribal Databases

Dotobooo	Description	Radius	Lietinos
Database	Description Federal	(miles)	Listings
NPL	This database includes EPA NPL sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action.	1	0
NPL (Delisted)	The NPL (Delisted) database includes facilities that have been removed from the NPL.	1	0
SEMS	SEMS is the repository for site- and non-site-specific Superfund information in support of CERCLA. This database contains an extract of sites that have been investigated or are in the process of being investigated for potential environmental risk.	0.5	0
CERCLIS (SEMS)- NFRAP	The CERCLIS (SEMS)/NFRAP database contains facilities that have been removed and archived from the EPA's inventory of CERCLIS (SEMS) sites.	0.5	1
RCRA/CORRACTS	The EPA maintains a database of RCRA facilities associated with treatment, storage, and disposal of hazardous waste that are undergoing "corrective action." A "corrective action" order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.	1	0
RCRA Non- CORRACTS/TSD	The RCRA Non-CORRACTS/TSD database is a compilation by the EPA of facilities that report storage, transportation, treatment, or disposal of hazardous waste. Unlike the RCRA CORRACTS/TSD database, the RCRA Non-CORRACTS/TSD database does not include RCRA facilities where corrective action is required.	0.5	0

6

Table 2 Facilities Identified in Federal and State/Tribal Databases

Radius				
Database	Description	(miles)	Listings	
RCRA Generators	The RCRA Generators database, maintained by the EPA, lists facilities that generate hazardous waste as part of their normal business practices. Generators are listed as either large (LQG), small (SQG), or conditionally exempt (CESQG). LQGs produce at least 1,000 kg/month of non-acutely hazardous waste or 1 kg/month of acutely hazardous waste. SQGs produce 100–1,000 kg/month of non-acutely hazardous waste. CESQG are those that generate less than 100 kg/month of non-acutely hazardous waste.	0.25	0	
IC/EC	A listing of sites with IC/EC in place. ICs include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the IC. ECs include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health.	0.5	0	
ERNS	ERNS is a listing compiled by the EPA on reported releases of petroleum and hazardous substances to the air soil and/or water.	Target Property	0	
	State/Tribal			
CSCSL	State-equivalent and/or tribal-equivalent database of SEMS sites. These facilities may or may not already be listed on the federal SEMS lists. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified, along with facilities where cleanup will be paid for by potentially responsible parties.	1	1	
SWF/LF	State and/or tribal database of solid waste facilities located within the state of Washington. The database information may include the facility name, class, operation type, area, estimated operational life, and owner.	0.5	1	
LUST	State and/or tribal database of LUSTs in state of Washington.	0.5	6	
UST	State and/or tribal database of registered USTs in the state of Washington that may include the owner and location of the USTs.	0.25	8

The EDR search revealed five facilities within a 1/8-mile radius of the site. Of these, one is associated with the site itself. The site was the subject of an Ecology enforcement/compliance activity on June 22, 2008. It also is associated with a report of a chemical spill on December 16, 2004. Although an Ecology Facility ID of 545293 is provided in the EDR report for this incident, this ID number did not return any results within Ecology's Cleanup Site database. Likewise, the database did not contain any information related to the June 22, 2008 chemical spill. Ecology was contacted regarding these activities/incidents, but did not have a record of any interactions with subject property (Scheffer 2020; Furmall 2020).

8

The EDR report indicates the former presence of an unleaded gasoline UST at the School District's administration building immediately to the south of the subject property. The tank (Ecology UST ID 7812) had a capacity of 550 gallons and was installed on December 31, 1964 (Ecology 2020a; AP&E 1989). It was removed on October 13, 1989 and soil samples were collected (AP&E 1989). Associated sample results could not be located by the Cascade School District or Ecology's UST program.

Approximately 554 feet southeast from the subject property is the United States Department of Agriculture, Forest Service Leavenworth Ranger Station. The station is at a lower elevation than the subject property and is associated with five USTs (Ecology UST ID 1300), all of which were installed in 1964 and have since been removed (date not provided) (EDR 2020; Ecology 2020b). Of these tanks, two contained diesel, one unleaded gasoline, one leaded gasoline, and one waste oil. Tank capacities were between 111 and 1,100 gallons (Ecology 2020b). This facility is included in Table 2 as being on Ecology's Confirmed and Suspected Contaminated Sites List (Ecology Facility ID 365) due to a spill of petroleum products that was reported to Ecology in February 1994 in an Interim Cleanup Report. No further information related to this spill and cleanup is available through Ecology, however, the site's status with this agency is "No Further Action" (EDR 2020; Ecology 2020c). Finally, a vehicle wash sump at the ranger station received a No Further Remedial Action Planned determination from the EPA in 1996 (EDR 2020).

Wards Funeral Chapel, located approximately 619 feet north of the subject property and at a slightly higher elevation once contained a 300-gallon capacity unleaded gasoline UST that was installed in 1990. This tank has been removed (date not provided). (EDR 2020; Ecology 2020d)

The Cascade School District operates a bus barn at a location approximately 677 feet southeast of the subject property and at a slightly lower elevation. This facility once contained three USTs (Ecology UST ID 7811). These included a heating fuel tank installed in 1964 (capacity provided as between 111 to 1,100-gallons), a 1,000-gallon diesel tank installed in 1978, and a 500-gallon waste oil tank installed in 1973. The heating fuel tank as a status of "Exempt"; the other two tanks have been removed (dates not provided) (Ecology 2020e). This facility is also the location of a hydraulic oil spill (Ecology ID 49657344). In December 1993, sampling of wells during an investigation related to this spill detected diesel and heavy oil range hydrocarbons in groundwater above Ecology Model Toxics Control Act (MTCA) Method A cleanup levels. A subsequent spill in January 1994 resulted in additional soil sampling and four quarters of groundwater monitoring. Groundwater monitoring data had no detections of total petroleum hydrocarbons. Based upon cleanup activities, Ecology determined the site was no longer a threat to human health and the environment. Ecology made a No Further Action determination for this facility in May 2012 (Ecology 2020f).

A review of Ecology's Leaking Underground Storage Tank (LUST) online database revealed that all LUST sites within 0.5 mile of the subject property (Table 2) have statuses "No Further Action" (Ecology 2020g). Based on the EDR report, all sites identified as having submitted incident cleanup reports to Ecology within 0.5 mile of the subject

property (Table 2) have statues of "No Further Action". The one site in Table 2 within 0.5 mile of the subject property having been enrolled in Ecology's Voluntary Cleanup Program (VCP) is Leavenworth Chevron (Ecology Cleanup ID 5360) located approximately 690 feet to the southeast and at a slightly lower elevation relative to the subject property (EDR 2020). This VCP enrollment was related to a LUST reported to Ecology in 1990. Ecology provided an opinion on the cleanup action in 2008, assigning the site a status of "No Further Action" (Ecology 2020h).

In general, facilities included in the above paragraphs are not associated with present day contamination. Given the absence of contamination at these locations, they do not appear to present an elevated risk of impact to the subject property.

### 4.2.2 Vapor Encroachment Screen

The EDR database search shown in Appendix C includes a Vapor Encroachment Screen report that lists nearby properties that could present a vapor intrusion risk to future buildings on the site from the migration of volatile organic compounds in groundwater to the air space within the future buildings. The report indicated there were no facilities within 0.1 mile from the site that could represent a vapor encroachment risk.

The report also identified four facilities between 0.1 and 0.364 mile up- to cross-gradient hydro-geologically from the site. The two upgradient facilities are the Wards Funeral Chapel UST site and the Pinegrass Subdivision. As previously mentioned, Wards Funeral Chapel once contained a 300-gallon capacity unleaded gasoline UST that was installed in 1990 and later removed. As this site is not in Ecology's LUST database and is not in Ecology's Cleanup Site database, it appears this tank is not known to have had a release (EDR 2020; Ecology 2020d). For this reason, this UST it is not expected to represent a vapor encroachment risk to the subject property. According to the EDR report, the Pinegrass Subdivision site is associated with a March 2016 Ecology-issued construction stormwater permit; however, a search of Ecology's Water Quality Permitting and Reporting Information System did not return any results for this site name or the Program ID provided in the EDR report of WAR304049. Given that this site is not associated with a release of hazardous materials, it is not expected to represent a vapor encroachment risk.

The two cross-gradient sites located between 0.1 and 0.364 mile of the subject property are the 12240 Pine St. Home Heating Tank site (Ecology Site ID 3387) and the Cascade School District 228, 10150 Titus Road site (Ecology Site ID 49657344). The 12240 Pine St. Home Heating Tank is associated with a leaking 500-gallon capacity residential heating oil UST on property that had been purchased in 2015 by the Cascade School District. Since this UST was not registered with Ecology, it is not contained within Ecology's UST or LUST databases. In March 2016, this UST was removed and a diesel odor and stained soils were observed in the excavation indicating a release. In April and May of that year, approximately 1,310 tons of contaminated soil were excavated and transferred to a disposal facility in Wenatchee, Washington for recycling. Analytical results of soil samples collected from the floor and sidewalls of the excavation confirmed that all petroleum-related contaminated soils had been successfully removed (Fulcrum 2016). In May 2018, Ecology provided the site a No Further Remedial Action determination letter indicating

that no further cleanup work was necessary since contamination in remaining site soils were less than Ecology MTCA cleanup levels for unrestricted land use, and since there was no evidence of groundwater contamination (Winslow 2018). The other cross-gradient facility is also owned by the Cascade School District and is the location of the Alpine Lakes Elementary School. A review of information related to this site on Ecology's cleanup site database indicates this site was provided a "No Further Action" determination. Links to documents in that database lead to those associated with the School District Bus Barn facility (Ecology Site ID 7811), hence, the nature of contamination at the Alpine Lakes Elementary site is not known. However, since the site was provided a "No Further Action" determination, it is not expected to be associated with present-day contamination (Ecology 2020j). Neither of the cross-gradient sites are expected to represent potential vapor encroachment risks to the subject property due to a lack of contamination at each.

## 4.3 Chelan County Fire District #3 Fire Department Records

Chelan County Fire District #3 was contacted for records they may have pertaining to fires, USTs, and hazardous materials storage, incidents, or spills that may have occurred at the site. The fire district indicated they had on record a total of 17 calls including 12 for emergency medical services, four false fire alarms, and one for a chemical incident (Kuch 2020). The chemical incident was for a December 16, 2004 reported possible chemical spill that was making people in the school building nauseous. The odor was determined to be from shoes a student was wearing. The shoes were tested, but no hazardous material was detected on them (CCFD#3 2004). Given that the date of this incident is the same date as for the Ecology chemical spill (Ecology Facility ID of 545293) included with the EDR report (see Section 4.2.1), these incidents are likely one in the same.

## 4.4 City of Leavenworth Building and Planning Department Records

Public records available through the City of Leavenworth Planning Department were requested to determine the dates of on-site building construction, alterations, and demolition (Appendix D). The following permits or permit applications were located:

- An approved 1970 building permit application for wainscoating of plywood in the lower hall of the gym building over plastered walls.
- An approved 1983 conditional use permit to remodel, modernize, and expand the elementary school building and to remove the existing boiler building. More specifically, the permit included redesigning and reallocating existing classroom space to increase the number of classrooms from 10 to 13, the addition of a 55-foot by 58-foot commons to the southwest wing of the existing building, adding a covered playground, redesign of the entry area with landscaping and sidewalks, and elimination of parking spaces in front of the building along Central Avenue. This permit also covered work to be conducted on the on the south ½ of parcel 241701680397 including converting the middle school to a storage and an administration building, creating a parking lot, and adding bus lanes.

■ An approved 1985 building permit application for the property address of 225 Central Avenue for renovation of the existing building to an administrative office and board room. This permit appears to be associated with the administration building on the south ½ of parcel 241701680397, rather than with the subject property.

## 4.5 Property Ownership Information

Property ownership information available online from the Chelan County Tax Assessor's webpage indicates that Tax Parcel Number 241701680397 is owned by Cascade School District, School District Number 228 (Chelan County 2020). This property, described as Leavenworth Gardens Lots 1 and 12, Block 6, was sold by Chelan County to School District Number 109 (apparently now Number 228) at a public auction in December 1927 and recorded as a final sale in January 1928 (Chelan County 1928, 2020). The School District has surplused the northern 2.69 acres of this parcel (Cortez-Steiner 2020). This portion of the parcel is the subject of this Phase I ESA and is being considered for purchase by the City of Leavenworth (CoL 2020).

## 4.6 Liens and Activity Use Limitations

The EDR report (Appendix C) includes the results for a search of available current land title records for environmental cleanup liens and other activity and use limitations on the site, such as engineering controls and institutional controls. For the site's tax parcel (parcel 241701680397), no environmental liens were found and neither were activity and use limitations found.

## 4.7 Physical Setting Sources

Table 3 summarizes the topography, soil characteristics, and geology/hydrology of the site.

Table 3 Physical Setting of the Site

<b>Physical Setting Informat</b>	Source	
	Topography	
Site Elevation	Approximately 1,184 feet amsl.	EDR 2020
Surface Runoff/Topographic	The site is predominately flat. Rainfall	
Gradient	generally infiltrates the ground surface.	WSP Site Visit 7/15/2020
Closest surface water	The Wenatchee River is located	
	approximately 0.3 mile south of the site.

## 4.8 Historical Use Information on the Property

## 4.8.1 Historical Topographic Maps

The following historical topographic maps supplied by EDR were reviewed (see Appendix C):

- Chiwaukum, year 1901, scale 30-minute;
- Chiwaukum, year 1904, scale 30-minute;
- Leavenworth, year 1964, scale 15-minute;
- Leavenworth, year 1989, scale 7.5-minute;
- Leavenworth, year 2003, scale 7.5-minute; and
- Leavenworth, year 2014, scale 7.5 minute.

In general, these maps only provided sufficient detail to document changes in roadway development and other similar scale developmental changes. The topographic maps from each year are described below.

- **1901 and 1904:** The subject property is undeveloped land as is all land within 0.25 mile of the site.
- 1964: The subject property is indicated to have a school building present. The town of Leavenworth has been substantially expanded relative to the 1904 topographic map. Streets and residences surround the site. A church is indicated to the south of the subject property.
- **1989**: No material changes to the subject property or its surroundings are evident relative to the 1964 topographic map.
- 2003: No material changes to the subject property or its surroundings are evident relative to the 1989 topographic map, however, the 2003 topographic map does include symbols for in-town residences.
- **2014**: No material changes to the subject property or its surroundings are evident relative to the 2003 topographic map.

## 4.8.2 Historical Aerial Photographs

Historical aerial photographs supplied by EDR were reviewed for the following years: 1957, 1963, 1983, 1985, 1990, 1998, 2006, 2009, 2013, and 2017. Copies of these historic aerial photographs are provided in Appendix C. The photographs for each of these years are described below.

- 1957: The Osborn Elementary School building is in view as are two buildings on the southern ½ of the tax parcel (to the south of the subject property). Town streets are present as are residential buildings.
- **1963**: No material changes to the subject property or its surroundings are evident relative to the 1957 aerial photograph.
- 1983: No material changes to the subject property. The two buildings on the southern portion of the tax lot (to the south of the subject property) have been removed and the northeastern of these replaced with a smaller building.
- 1985: It appears there have been some remodeling/additions to the south wing of the school building. Additionally, the building has been re-roofed. It appears a parking lot may have been added to the southern portion of the parcel (to the south of the subject property). No material changes to properties in the vicinity of the subject property are evident.
- 1990: This image is in black and white and has poor resolution. It appears a playground may have been developed on the northwest portion of the subject property. No other changes to the subject property or the site's general setting could be discerned.
- **1998**: No material changes to the subject property or its surroundings are evident relative to the 1990 aerial photograph.

- 2006: It appears that some land to the south of the playground has been cleared of vegetation. No other changes to the subject property or the surrounding areas are evident.
- **2009 and 2013**: No material changes to the subject property or its surroundings are evident relative to the 2006 aerial photograph.
- 2017: No material changes to the subject property are evident relative to the 2013 aerial photograph. Tennis courts have been added to the southern ½ of the parcel (to the south of the subject property).

## 4.8.3 Historical City Directories

City directory reports were available for the property address of 225 Central Avenue for several years from 1992 to 2017 as provided in Table 4.

**Table 4** Directory Findings Summary

Address	Occupant	Year
225 Central Avenue	No listing	1992
	Osborn Elementary School	1995
	Cascade School District No. 228	2000
	Osborn Elementary School	2005
	Osborn Elementary School	2010
	Cascade School District	2014
	Cascade School District	2017

## 4.8.4 Historical Fire Insurance Maps

In the late 19th century, companies such as the Sanborn Company began preparing maps of central business districts for use by fire insurance companies. These maps were updated and geographically expanded throughout the 20th century. Fire insurance maps often indicate construction materials, specific property use, and the location of other features such as gasoline storage tanks. A search by EDR of the complete holdings of the Sanborn Library, LLC, collection found fire maps for the years 1909, 1921, and 1931 covering the subject property (Appendix C). Site features included on these maps are as follows:

- 1909: The subject property contains four small structures; three appear to be residences and one an outbuilding. The southern ½ of the parcel (to the south of the subject property) contains a building marked as a public school and having two steam heaters.
- 1921: The subject property appears to have been divided into six lots. The four structures in the 1909 map seem to have been either removed or expanded. In total, seven buildings are in view with four being residences and three being outbuildings (one marked as a shed). The school building on the southern ½ of the parcel (to the south of the subject property) is marked as class rooms and two new buildings have been added to this land, one marked as an auditorium, stage and scenery, and central heating plant; the other building is marked as a high school

- having a uses of "domestic science", auditorium, and "manual training". The map indicates these building were served by steam heat and electric lighting.
- 1931: One residence and one outbuilding have been removed from the subject property. No buildings have been added to the subject property and no changes to the southern ½ of the parcel (to the south of the subject property) are evident.

## 5. Site Reconnaissance

The purpose of a site reconnaissance is to obtain information indicating the likelihood of identifying RECs in connection with the site.

## 5.1 Methodology and Limiting Conditions

The site reconnaissance was conducted on July 15, 2020. The following personnel attended the reconnaissance:

- Jason O'Brien, Cascade School District, Warehouse/Delivery and Maintenance Staff; and
- Derek Pulvino, WSP, Senior Environmental Scientist.

The select portions of the building interior were reviewed, focusing on areas where custodial or other maintenance activity may occur, equipment rooms, and a representative number of classroom and other building spaces to better understand materials and finishes used in building construction. Exterior areas of the property were also surveyed for possible signs or sources of environmental contamination. Photographs of the site visit are presented in Appendix A and are referenced in the sections below, as appropriate.

## 5.2 General Site Setting

The subject property is located in area of Leavenworth zoned as Residential Low Density 6,000 (RL6), under the jurisdiction of the City of Leavenworth (PAA 2019). The subject property is bordered to the west, north, and east by city streets beyond which are residences; to the south is the school district's administration building, its associated parking lot, and school tennis courts (Photos 8 and 9). Allowed zoning uses include single- and two-family dwellings, accessory dwelling units, garages, carports, work and/or storage sheds for non-commercial use, family day care, mini-day care, adult family homes, public parks, swimming pools, and hope occupation. Permissible additional uses requiring a conditional use permit include churches, educational institutions, community centers, public libraries, public recreation, museums/galleries, golf courses, hospitals, manufactured home park, bed and breakfast businesses, public utility structures, and wireless telecommunication facilities (PAA 2019).

## 5.2.1 Current Use of the Property

The Osborn Elementary property is a public-school district owned site that had most recently been occupied by Kindergarten through  $2^{nd}$  grade elementary students. At the time of the site visit, the building was out of use as a school, with interior areas used to store school equipment and supplies such as chairs, desks, tables, books, printers, etc.

(Photo 15). Exterior areas on the western portion of the property include a playground and athletic fields (Photos 4 through 7), with a covered courtyard area located on the western side of the school building (Photo 7). Several trailers were stored within this courtyard area, including one food-concessionaire trailer. An asphalt paved driveway accesses the property on the south side of the school. The area immediately adjacent to the school building does not contain any parking. Pole-mounted electrical service transformers were observed on utility poles within the rights-of-way surrounding the subject property.

## 5.2.2 Past Use of the Property

From historic fire insurance maps, it appears that a small portion of the subject property was used for residences from at least 1909 to 1931. The original Osborn Elementary School building was constructed in 1955. The school closed in 2019.

## **5.2.3 General Description of Site Features**

The school building is generally of masonry brick construction some portions of exterior walls covered with a stucco-like material. The roof is of metal construction with a low-pitch, gable-style over southern wing and generally flat shed-style over remaining roofed areas. All floors are on a concrete slab and covered with either tile, commercial grade vinyl, or commercial grade carpeting. Classroom, faculty lounge, and hallway ceilings are generally constructed of acoustic tile. All portions of the building have electrical heating and ventilation; there is no air conditioning system (WSP 2020; PAA 2019).

As mentioned in Section 5.2.1, the subject property is a school-district owned facility, most recently used as an elementary school. Observations from the site visit are included in the following bulleted paragraphs.

- The school building is a wood-framed structure with exterior brick walls, and a combination of flat and pitched roof. The building covers eastern half of the property, with the main entrances from the east, where the site fronts to Central Avenue east (Photos 1 through 3).
- The western half of the property is occupied by a grass covered athletic field and a playground. The playground includes typical children's play toys such as slides, swings, and monkey bars, and includes a soil and/or wood chip covered ground surface. A baseball backstop is located on the northwest corner of the athletic field (Photos 4 through 7).
- The property south of the site includes a two-story, brick faced building, an asphalt paved parking lot, and recently constructed tennis courts. According to information obtained during the site reconnaissance, this building had been the original school for the area, with the western portion of the building being demolished in more recent times.
- An asphalt paved access drive is located between the Osborn Elementary School building and the southern adjacent structure. An electrical transformer cabinet was located on the north side of this drive, and likely represents the main electrical feed to the school (Photos 9 and 10). The school kitchen is also located near this driveway, on the southern side of the subject building.

- A remnant concrete footing and what appears to be the outline of a historic chimney was observed on the western margin of this asphalt drive. According to Mr. O'Brien, this footing was associated with the now demolished portions of the southern adjacent building, with visible patterns and match lines on the western brick wall of the administration building indicating the past presence of abutting walls. In addition, the building's furnace/boiler room was also apparently located in this area. A UST used to store heating-oil had also apparently been removed from this area (Photos 11 and 12).
- Two utility tunnels are located beneath the northern wing of the school building. Access to these tunnels is available from the western exterior of the building, with the access doors located beneath large sheet-metal covers, and further limited by way of a locked door (Photos 13 and 14). Signs were noted on these locked doors warning of the presence of asbestos in the tunnels. Mr. O'Brien indicated that these tunnels cannot currently be accessed from within the school building.
- Interior spaces within the building such as the library, classrooms, and office area, were all noted to include gypsum board walls, suspended 2'x4' cellulose ceiling tiles with fluorescent light fixtures, and carpet covered floors. Bathrooms also included gypsum board walls, fluorescent light fixtures, with mosaic ceramic tile floor and partial wall coverings. Such material finishes appeared to be typical within the buildings (Photos 15 through 17).
- The maintenance/custodial room is located near the northeast corner of the school. Floors in this area were finished with a sheet vinyl covering. A mop sink along with several soap dispensers were situated in the southwest corner of the room. These soaps were noted to be water soluble. No solvents or other evidence of similar cleaning supplies were observed during the site visit (Photos 18 through 20).
- An electrical utility room is located on the north side of the custodial closet. Mastic patterns on the floor indicate that 9"x9" square vinyl tile had been removed from this room. A main circuit breaker panel, dry-type transformer (i.e., no cooling oils), and backup power cabinet were all present in this closet. Based on the maintenance log and other paperwork within the cabinet, this backup power source appears to have been used from 1984 until 2014. As this backup power source used batteries, it does not appear that a gas/diesel generator was used for the building (Photos 21 and 22). A second electrical room is located on the south side of the gymnasium/multi-purpose room (Photo 25), near the exterior transformer cabinet.
- Heat in the building is supplied by a forced air, electric heaters. Air intakes and air-handling units are located in an equipment loft accessed through a panel in the ceiling of the maintenance/custodial room. An electric water heater was also noted in this area. Visible pipe insulation was noted to be fiberglass (Photos 23 and 24). A second air-handling unit is located above the kitchen on the southern wing of the building (Photo 27). The access point to this second set of heating equipment is in the hallway outside of the kitchen, through an opening above the suspended ceiling tile.

• The school's kitchen is located on the southern wing of the building. Finishes in the kitchen again include gypsum board walls and a sheet vinyl flooring (Photo 26).

## 5.2.4 Potable Water Supply

According to information provided by Mr. O'Brien during the site visit, the building is attached to the local water district. No wells were noted on the site during the course of the site visit.

## 5.2.5 Sewage Disposal System

According to information provided by Mr. O'Brien, the subject building is also attached to the municipal sewage system. One storm sewer grate was observed on the west side of the school building. Otherwise, no pits, ponds, or lagoons were observed on the site during the site visit, nor did Mr. O'Brien indicate the presence of such features.

## 6. Interviews

Interviews with individuals knowledgeable about the site were conducted and included conversations and email communications with Ms. Disher, Facilities Director with the Cascade School District; Mr. O'Brien, Maintenance Staff Member also with the Cascade School District; Ana Cortez-Steiner, City Administrator with the City of Leavenworth; Ali Furmall, Small & Rural Communities Brownfields Specialist with Ecology; Jeff phoneserverNewschwander with Ecology's Toxics Cleanup Program-Central Region Office; and Jill Scheffer, Section Planner with Ecology's Toxics Cleanup Program. Information obtained from these individuals has been incorporated into this Phase I ESA where appropriate.

## 7. Findings and Conclusions

WSP performed a Phase I ESA of the site in accordance with the scope and limitations of ASTM Practice E1527-13. Any exceptions to, or omissions from, this process are described in Section 2.7 of this report.

One REC was identified for the subject property under this Phase I ESA as follows:

The location of a former UST on land to the immediate south of the subject property. This former tank previously contained gasoline and could have released this material to the subsurface.

The following data gaps affected WSP's ability to identify RECs associated with the property:

• The site was the subject of an Ecology enforcement/compliance activity on June 22, 2008. Records associated with this event were not available from Ecology.

 Soil sample results associated with the removal of the UST at the southern adjacent property could not be located.

No historic RECs in connection with the site were identified.

## 7.1. Signature and Qualifications of Environmental Professional Conducting Site Assessment

Ms. Linda Ader of WSP prepared this Phase I ESA report.

By signing this report, I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in 40 Code of Federal Regulations (CFR) Part 312, Section 312.10 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site (Appendix E). I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

	Lends ! Adar	<u>10/7/2020</u>
Linda Ader		Date

## 8. Non-Scope Services

This section provides a place for any additional services outside the scope of the Phase I ESA that may have been performed. No additional services beyond the scope of ASTM Standard E1527-13 were conducted as part of this assessment.

# **User-Provided Questionnaire**

# Phase I Environmental Assessment User Questionnaire

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

Pursuant to ASTM-1527-13, the *user* may include a potential purchaser of the property, a potential tenant of the property, an owner of the property, a lender, or a property manager. The *environmental professional* is generally understood as the person and/or entity performing the Phase I who has met the education, training, and experience requirements set forth in 40 CFR 312.10(b).

PERSON COMPLETING QUESTIONNAIRE: Teresa Disher, Facilities Director SUBJECT PROPERTY (address): 225 Central Ave, Leavenworth, was USER TYPE (purchaser, tenant, owner): Owner

1. Environmental liens that are filed or recorded against the property (40 CFR 312.25). Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

Yes / No

If yes, please describe:

2. Activity and use limitations (AULs) that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)).

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

Yes / No

If yes, please describe:

3.	Specialized knowledge or experience of the person seeking to qualify for the LLP
	(40 CFR 312.28).

Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property*, such that you would have specialized knowledge of the chemicals and processes used by this type of business or at this site?

Yes (No)

If you have such knowledge or experience, please describe:

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? Yes/No/NA

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*? Yes / No (NA)

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,

- a) Do you know the past uses of the *property* and/or adjacent properties? Yes / No: If yes, please describe:
- b) Do you know of specific chemicals that are present or once were present at the *property*? Yes /(No:) If yes, please describe:
- c) Do you know of spills or other chemical releases that have taken place at the *property*? Yes (No:) If yes, please describe:

a)	Yes / No: If yes, please describe and provide copies of relevant documents:
6.	The degree of obviousness of the presence or likely presence of contamination at the <i>property</i> , and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).
Ba	sed on your knowledge and experience related to the property, and surrounding area, are
	Yes / No:  If yes, please describe and provide copies of relevant documents:  The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation
7.	In addition, to assist the environmental professional complete the Phase I
	Assessment of the property, please provide the following information, as available.
a)	the reason why the Phase I is being performed: Possible purchase of property by the City of Leavenworth
b)	exchange, etc., Sale of property (real) and building
c)	the complete and correct address for the <i>property</i> (a map or other documentation showing <i>property</i> location and boundaries is helpful),
d)	any reports relating to environmental sampling and testing (i.e. Phase I, Phase II, Underground Storage Tank removal reports, cleanup reports, etc.) performed at or

#### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

#### STANDARD ENVIRONMENTAL RECORDS

#### Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a

given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
USDA FS WENATCHEE NF Site ID: 1001901 EPA Id: WA7122300174	600 SHERBOURNE ST	ESE 0 - 1/8 (0.105 mi.)	B5	19

#### State- and tribal - equivalent CERCLIS

CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the CSCSL list, as provided by EDR, and dated 04/13/2020 has revealed that there is 1 CSCSL site within approximately 1 mile of the target property.

Ground Water: Confirmed Above Cleanup Levels Contaminant Name: Halogenated Organics

Contaminant Name: Petroleum Products-Unspecified

#### State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Ecology's Solid Waste Facilities Handbook.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

#### State and tribal voluntary cleanup sites

ICR: These are remedial action reports Ecology has received from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree.

A review of the ICR list, as provided by EDR, and dated 12/01/2002 has revealed that there are 5 ICR sites within approximately 0.5 miles of the target property.

CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the CSCSL NFA list, as provided by EDR, and dated 04/13/2020 has revealed that there are 11 CSCSL NFA sites within approximately 0.5 miles of the target property.

#### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

US DA FS LEAVENWORTH EPA ID:: WA7122300174	600 SHERBOURNE	ESE 0 - 1/8 (0.105 mi.)	B4	10

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/03/2020 has revealed that there is 1 FINDS site within approximately 0.001 miles of the target property.

Environmental Interest/Information System:

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

corrective action activities required under RCRA HAZARDOUS WASTE BIENNIAL REPORTER

Registry ID: 110069207245

Click Here:

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Next Scheduled EDR Contact: 10/12/2020 Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

### Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

### Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019 Date Data Arrived at EDR: 04/05/2019 Date Made Active in Reports: 05/14/2019

Next Scheduled EDR Contact: 10/12/2020 Data Release Frequency: Varies

### SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Next Scheduled EDR Contact: 07/27/2020 Data Release Frequency: Quarterly

#### Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

#### Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/23/2020 Date Data Arrived at EDR: 03/25/2020 Date Made Active in Reports: 05/21/2020

Number of Days to Update: 57

#### RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/23/2020 Date Data Arrived at EDR: 03/25/2020 Date Made Active in Reports: 05/21/2020

Number of Days to Update: 57

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation
and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database
includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste
as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate
less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/23/2020 Date Data Arrived at EDR: 03/25/2020 Date Made Active in Reports: 05/21/2020

#### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 02/13/2020 Date Data Arrived at EDR: 02/20/2020 Date Made Active in Reports: 05/15/2020

Number of Days to Update: 85

Source: Environmental Protection Agency

Telephone: 703-603-0695 Last EDR Contact: 05/15/2020

Next Scheduled EDR Contact: 09/07/2020 Data Release Frequency: Varies

### US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 02/13/2020 Date Data Arrived at EDR: 02/20/2020 Date Made Active in Reports: 05/15/2020

Next Scheduled EDR Contact: 09/14/2020 Data Release Frequency: Semi-Annually

### State- and tribal - equivalent CERCLIS

CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 04/13/2020 Date Data Arrived at EDR: 04/15/2020 Date Made Active in Reports: 07/01/2020

Number of Days to Update: 77

### State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing

A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

Date of Government Version: 04/13/2020 Date Data Arrived at EDR: 04/15/2020 Date Made Active in Reports: 07/01/2020

Next Scheduled EDR Contact: 07/27/2020 Data Release Frequency: Quarterly

### ADDITIONAL ENVIRONMENTAL RECORDS

#### Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

#### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

#### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

#### ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

#### **EDR HIGH RISK HISTORICAL RECORDS**

## **EDR Exclusive Records**

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A Date Data Arrived at EDR: N/A Date Made Active in Reports: N/A Number of Days to Update: N/A Source: EDR, Inc. Telephone: N/A Last EDR Contact: N/A

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## TACOMA/PIERCE COUNTY:

LF TACOMA/PIERCE: Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

Date of Government Version: 09/01/2002 Date Data Arrived at EDR: 03/24/2003 Date Made Active in Reports: 05/14/2003

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

#### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

# **GEOCHECK®-PHYSICAL SETTING SOURCE ADDENDUM**

#### **TARGET PROPERTY ADDRESS**

OSBORNE ELEMENTARY 225 CENTRAL AVENUE LEAVENWORTH, WA 98826

#### **TARGET PROPERTY COORDINATES**

Latitude (North): 47.598314 - 47° 35' 53.93" Longitude (West): 120.664232 - 120° 39' 51.24"

Universal Tranverse Mercator: Zone 10 UTM X (Meters): 675587.2 UTM Y (Meters): 5274081.0

Elevation: 1184 ft. above sea level

#### **USGS TOPOGRAPHIC MAP**

Target Property Map: 6004283 LEAVENWORTH, WA

Version Date: 2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

### **GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

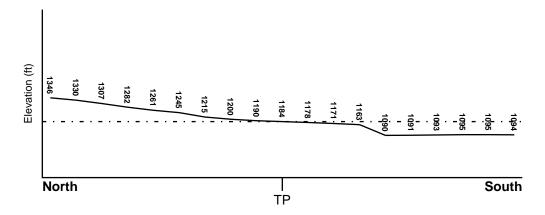

#### **TOPOGRAPHIC INFORMATION**

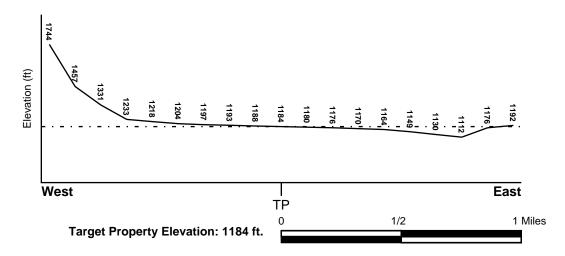

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

#### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

#### **SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

#### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

#### **FEMA FLOOD ZONE**

Flood Plain Panel at Target Property FEMA Source Type

Additional Panels in search area: FEMA Source Type

5300150800A FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

CHIWAUKUM 4 SW YES - refer to the Overview Map and Detail Map

#### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

#### Site-Specific Hydrogeological Data\*:

Search Radius: 1.25 miles Status: Not found

#### **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Colockum

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Bou	ındary		Classification		Saturated hydraulic

Soil Map ID: 2

Soil Component Name: Peshastin

Soil Surface Texture: stony loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Map ID: 3

Soil Component Name: Peoh

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

### **LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

#### **TOPOGRAPHIC INFORMATION**

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

#### HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory Source: Department of Ecology Telephone: 360-407-6121

#### HYDROGEOLOGIC INFORMATION

AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

#### LOCAL / REGIONAL WATER AGENCY RECORDS

#### FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

#### STATE RECORDS

Water Wells

Source: Department of Health Telephone: 360-236-3148 Group A and B well locations.

Water Well Listing

Source: Public Utility District Telephone: 206-779-7656

A listing of water well locations in Kitsap County.

**Ecology Well Logs** 

Source: Department of Ecology Telephone: 360-407-7294

Point geodatabase with a record for each Ecology well report. Points are located by quarter quarter section centroid. Points contain all well report types including water wells, resource protection wells, and decommissioned wells.

### OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing

Source: Department of Natural Resources

Telephone: 360-902-1450

Locations that represent oil and gas test well sites in Washington State from 1890 to present.

#### RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at

private sources such as universities and research institutions.

**EPA Radon Zones** 

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

### EDR BUILDING PERMIT REPORT

#### **About This Report**

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

#### **ASTM and EPA Requirements**

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

#### Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

# **EXECUTIVE SUMMARY: SEARCH DOCUMENTATION**

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Ecology and Environment on Jul 09, 2020.

### **TARGET PROPERTY**

225 Central Avenue Leavenworth, WA 98826

### **SEARCH METHODS**

EDR searches available lists for both the Target Property and Surrounding Properties.

### **RESEARCH SUMMARY**

Building permits identified: NO PERMITS IDENTIFIED

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

#### **GLOSSARY**

#### **General Building Department concepts**

- ICC: The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections): This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- Jurisdiction: This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- GC: General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- Journeymen: Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- HVAC (Mechanical, Heating & Air companies): HVAC = Heating, Ventilation, and Air Conditioning.
- ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release): Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- "Pull" a permit: To obtain and pay for a building permit.
- CBO: Chief Building Official
- Planning Department: The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- Zoning Department: The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- Zoning District: A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- PIN (TMS, GIS ID, Parcel#): Property Identification Number and Tax Map System number.
- State Card (Business license): A license card issued to a contractor to conduct business.
- Building Inspector (Inspector): The inspector is a building department employee that inspects building construction for compliance to codes.
- C.O.: Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

### **GLOSSARY**

#### **Permit Content Definitions**

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

### Sample Building Permit Data

Date: Nov 09, 2000 Permit Type: Bldg -

New Permit Number: 101000000405 Status: Valuation: \$1,000,000.00 Contractor Company: OWNER-BUILDER

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

# **EDR Environmental Lien and AUL Search**

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

#### Thank you for your business.

#### **EXECUTIVE SUMMARY**

### **DESCRIPTION**

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

#### **RECORD SOURCES**

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

#### **RESEARCH SUMMARY**

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ecology and Environment were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

STAFF REPORT

Ale year and

May 18, 1983

APPLICATION FOR CONDITIONAL USE PERMIT: Public hearing on a proposal by the Leavenworth School District to remodel and expand Osborne Elementary School, located on Block 6, Leavenworth Gardens.

PROPOSAL: To remodel, modernize, and expand the Osborne Elementary School building, remove the existing boiler building, remodel the existing middle school building for storage and district administrative offices, redesign and landscape sidewalks, parking area, and bus lanes.

COMPREHENSIVE PLAN AND ZONING: This site is recognized for school use in the comprehensive plan, and is in the Low Density Residential (RL) district. Educational institutions are allowed as conditional uses in this district.

DISCUSSION: The remodeling of the existing elementary school building will result in an increase in the number of classrooms, from 10 to 13, through redesign and reallocation of space. A 55' x 58' commons will be added to the southwest wing of the existing building. Playfield space will be reallocated and a covered play area will be constructed. The entry area will be redesigned, with landscaping and new sidewalks. The existing right angle parking spaces in this area, off Central Ave., will be eliminated. These spaces, as they exist now, pose hazards to both vehicles and pedestrians, by requiring vehicles to back out into traffic upon existing, and do not conform with parking lot design requirements of the City's zoning ordinance, Section 18.48.090.C.

Curb-side bus loading zones will be established, along Birch St., and along Central Ave. These loading zones are located outside of the existing travel lands of these streets, are separated in location from the parking lot to reduce potential vehicle conflicts, will be served by new sidewalks, and would be available for on-street parking for patrons attending school functions (open house, conferences, special programs) during non-school hours.

The present middle school building will be remodeled to house the district administration offices and for storage. Approximately 1500 sq. ft. of space in this building will be devoted to office use.

The number of off-street parking spaces necessitated by this project is based upon a number of factors. The existing parking situation is substandard both in design and in numbers of spaces. A total of 24 spaces presently exist for a ten classroom school, with these spaces backing directly out onto Central Avenue. The number of spaces presently provided may be considered "grandfathered" for the ten classrooms. The three new classrooms created by remodeling require three spaces each, or nine added spaces. The 1500 sq. ft. of office space require one space per 300 sq. ft., or five added spaces. This results in a total of 38 spaces required, because of the remodeling and new construction. The proposed parking lot south of the administration building provides for 39 off-street parking spaces which meet all locational and design requirements (9'x 20' spaces, 27' aisle width).

Sidewalks will extend the full length of this parking area and tie in with the new walks along the school front, and with the existing sidewalk along Evans St.

RECOMMENDATION: The staff recommends approval of this permit, subject to the following conditions:

- 1. The parking lot be developed essentially as shown on the plan, with not less than 38 parking spaces.
  - 2. Sidewalks be installed essentially as shown on the plan.

 $\underline{\text{CONCLUSIONS}}$ : The following conclusions may be cited as findings of fact in support of this recommendation:

- 1. The proposed use conforms with the comprehensive plan;
- 2. Deficiencies in the existing parking situation will be remedied;
- 3. The proposed parking plan meets all the requirements and standards of the zoning ordinance.
- 4. The environmental impacts of the project have been considered and a negative declaration has been entered for the SEPA record.

Respectfully submitted.

Michael J. Cecka

Staff Planner

SCHEDULE OF FEES:

Minimum review \$10.00 W/additional info. \$50.00 If E.I.S. required \$100.00 - \$1,000.00 No.

#### ENVIRONMENTAL CHECKLIST

Introduction: The State Environmental Policy Act of 1971, Chapter 43.21C, RCW, requires all state and local governmental agencies to consider environmental values both for their own actions and when licensing private proposals. The Act also requires that an EIS be prepared for all major actions significantly affecting the quality of the environment. The purpose of this checklist is to help the agencies involved determine whether or not a proposal is such a major action.

Please answer the following questions as completely as you can with the information presently available to you. Where explanations of your answers are required, or where you believe an explanation would be helpful to government decision makers, include your explanation in the space provided, or use additional pages if necessary. You should include references to any reports or studies of which you are aware and which are relevant to the answers you provide. Complete answers to these questions now will help all agencies involved with your proposal to undertake the required environmental review without unnecessary delay.

The following questions apply to your total proposal, not just to the license for which you are currently applying or the proposal for which approval is sought. Your answers should include the impacts which will be caused by your proposal when it is completed, even though completion may not occur until sometime in the future. This will allow all of the agencies which will be involved to complete their environmental review now, without duplicating paperwork in the future.

NOTE: This is a standard form being used by all state and local agencies in the State of Washington for various types of proposals. Many of the questions may not apply to your proposal. If a question does not apply, just answer it "no" and continue on to the next question.

## City of Leavenworth

NOTICE OF PUBLIC HEARING

LEAVENWORTH BOARD OF ADJUSTMENT

NOTICE IS HEREBY GIVEN that the Leavenworth Board of Adjustment will hold a public hearing on May 18, 1983 at 8:00 P. M. in the Council Chambers at City Hall, 815 Front Street, Leavenworth, Wa. 98826 on the following application:

An application by Leavenworth School District for a Conditional Use Permit to allow updating of present school facilities located on Block 6, Lot 1 and 2, Leavenworth Gardens, and bounded by Birch, Central, Evans and Orchard Streets.

Interested citizens are invited to attend the hearing to comment either for or against the proposal or to mail their comments, in writing, to the Secretary of the Board of Adjustment, P. O. Box 287, Leavenworth, Wa. 98826.

Dated May 2, 1983

## Environmental Qualifications **Environmental Professional**

### LINDA E. ADER, Environmental Specialist

#### **EDUCATION**

B.A., Environmental Studies, University of Hawaii at Manoa - 1984

**TRAINING** 

ASTM Phase I/II ESA course - 2003

With 29 years' experience, Ms. Ader is a member of WSP's Seattle-based Superfund Technical Assessment and Response Team (START) that supports EPA Region 10 in Washington, Oregon, Idaho, and Alaska. Since 2002, she has been the Site Assessment Team Leader, responsible for providing QA for site assessment documents, training project managers, managing and allocating site assessment resources, and maintaining site assessment project budgets and schedules of deliverables.

As the Region 10 START Brownfields Team Leader, Ms. Ader plans and leads the implementation of Targeted Brownfields Assessments (TBAs) including Phase I Environmental Site Assessments (ESAs) in accordance with ASTM E1527-13. She develops site-specific sampling strategies; prepares site Sampling and Quality Assurance Plans (SQAPs); leads on-site investigations and sampling of areas with recognized environmental conditions (RECs) such

as the presence or likely presence of hazardous substances and petroleum products that indicate an existing release, past release, or threat of a release; and prepares and provides quality assurance oversight for Phase II ESA-type TBA reports that include identification and comparison of possible cleanup options and their projected costs. She coordinates closely with her EPA contacts to seek input and concurrence from stakeholders, providing close communication with the involved parties' lead to help streamline Brownfields site redevelopment.

### Representative START Region 10 Targeted Brownfields Assessments

Former 6<sup>th</sup> Avenue Alaska Gold Power Plant, Nome, Alaska. Ms. Ader completed a Phase I ESA and later a sampling TBA at this historic power generation plant. The subject property consisted of a 13.30-acre, irregularly-shaped parcel of land owned by the City of Nome. The site contained the former power generator building, boiler building, and multiple diesel aboveground storage tanks (ASTs) that formerly held fuel for use in generating power. The Phase I ESA was designed to identify actual and potential environmental liabilities associated with the subject property in support of redevelopment plans. Ms. Ader conducted a reconnaissance of the site, reviewed historical aerial photos of the of the entire project area, reviewed current and historical United States Geological Survey 7.5-minute topographic maps of the project area, and obtained and reviewed environmental files maintained by the Alaska Department of Environmental Conservation relating to the site and other nearby facilities in an effort to identify RECs. Subsequent to the Phase I ESA, a sampling TBA (similar to a Phase II ESA) was performed to assess subsurface soil and shallow ground water conditions at the location of three former ASTs.

Jefferson Avenue, Tacoma, Washington. Ms. Ader managed the START TBA for 34 City-owned properties spanning two city blocks. Historic land uses included residences, gas stations, automobile repair shops, used car sales businesses, a truck rental business, a car washing business, a printing business, and a pest control business. Several parcels were suspected of containing multiple underground storage tanks (USTs). Project stakeholders included the City of Tacoma (including the municipal UST program), the Tacoma-Pierce County Health Department Brownfields program, and the Washington State Department of Ecology Voluntary Cleanup Program. As part of the TBA, Ms. Ader led the sampling of targeted areas where RECs had been identified, a geophysical survey of possible UST locations, and excavation of subsurface anomalies to determine whether site cleanup would be necessary before the area could be redeveloped. At each step of the TBA process, Ms. Ader partnered with her EPA contacts to seek input and concurrence from stakeholders. Her efforts to ensure close communication among the involved parties led to the expedited resolution of each individual REC and streamlined the site redevelopment process.
